SUMMARY

I've spent the last 22+ years building and scaling technology operating models for global manufacturing, healthcare, and distribution companies. Right now, I'm architecting a greenfield enterprise transformation for a major global Oil & Gas company — taking a fragmented, non-standardized tech landscape and turning it into a single platform that can actually scale. It's the latest in a run of ambiguous, ground-up transformation programs I've been trusted to lead.

A few things I'm proud of: I architected an AI-enabled revenue-recognition transformation that unlocked roughly \$200M in opportunity value and cut the recognition cycle by 10-15 days per customer invoice. I also rolled out a CAPA-driven shelf-life compliance solution across 90+ manufacturing and distribution sites for a ~\$12B medical technology company, which eliminated their risk of shipping expired devices. Along the way, stakeholders and CXOs have pointed to my ability to take ownership of messy, high-stakes problems, build alignment across global teams, and mentor junior talent through structured knowledge-sharing.

What I'm looking for next: enterprise-scale transformation work that closes the gap between "system live" and "value realized" — through business redesign, a clean-core approach, and paying down the technical debt that gets in the way of future AI and automation work. I'd bring that mix of enterprise architecture depth, hands-on AI transformation experience, and people-first leadership to a Practice Lead, Transformation Leader, or Enterprise Architecture Leader role, helping build enterprises that are more autonomous, more intelligent, and genuinely future-ready.

CORE COMPETENCIES

- Enterprise Architecture & Technology Strategy
- Global Template Design & Multi-Country Rollouts
- Executive Stakeholder Management & Influence
- Talent Development & Centre of Excellence Building
- AI-Enabled Digital Transformation
- Business Process Orchestration & Standardization
- SaaS, Subscription & Consumption Business Models
- Cross-Industry Business Transformation

EXPERIENCE

SAP | Client: Aramco Aug 2026 – Present
Enterprise Solution Architect | Bengaluru, India

- Brought in to architect a greenfield S/4HANA Private Cloud transformation for Aramco on the strength of prior cross-industry greenfield delivery, turning a fragmented, non-standardized landscape into a single, scalable enterprise platform architecture.

Philips Oct 2021 – Jun 2026
SAP SCM Solution Architect & Capability Lead | Bengaluru, India

- Volunteered to own an unproven, AI-enabled approach to revenue recognition for medical equipment control transfer, then architected and delivered it in under 6 months — expected to unlock ~\$200M in opportunity value and cut the recognition cycle by roughly 10 days.
- Built a CAPA-driven shelf-life management solution and deployed it across 90+ manufacturing and distribution sites worldwide, closing off the risk of shipping expired devices for a ~\$12B global medical technology business and strengthening regulatory compliance, patient safety, and customer trust.
- Designed the enterprise SaaS integration strategy linking SAP and Salesforce through scalable APIs, replacing a patchwork of point-to-point interfaces with one reusable framework now used as the standard for future programs — while also building a structured cross-module mentoring program that grew SCM bench strength and technical readiness.
- Grew SCM capability across a team of 90+ Philips consultants — driving cross-module integration, building out training programs, mentoring emerging talent, and running knowledge-sharing sessions that lifted operational efficiency and positioned the team for future growth.

Wipro | Client: Philips Jan 2020 – Oct 2021
SAP Senior Functional Consultant | Pune, India

- Led the global Regional Distribution Centre template design for Philips, drawing on prior template-delivery experience to standardize operations across the distribution network — the template went on to become the regional standard.
- Closed a critical operational gap by building the shipment and transportation integration between SAP and the third-party INFODIS platform, lifting workflow efficiency and processing speed across the network.

Infosys | Client: GE, Sulzer

SAP S/4HANA Consultant & Central Business Analyst | Pune, India

Nov 2016 – Jan 2020

- Led the greenfield S/4HANA implementation for Sulzer on the strength of functional/technical expertise and business-process capability, developing the industry-standard Order-to-Cash template in S/4HANA that was later adopted by Infosys as the discrete-manufacturing reference model in pre-sales pitches to win new projects.
- Brought in by GE as Central Business Analyst to lead a set of complex initiatives — Italy e-Invoicing, an internal entrepreneur billing system with 3-way match for internal procurement, and DUNS-based customer e-KYC — closing compliance and data-quality gaps by cleaning up 90K unregistered, duplicate, and non-functional customer records.

HCL | Client: Microsoft

SAP Senior Functional Consultant | Noida, India

Aug 2015 – Nov 2016

- Delivered the SAP Revenue Accounting & Reporting (RAR) integration for Microsoft, keeping US IFRS revenue reporting compliant for a Fortune 500 technology client.

TCS | Client: Cardinal Health, Voltas, Nelco, Oxford Stationary

SAP Project Manager & Lead Functional Consultant | Gandhinagar, India

Mar 2011 – Aug 2015

- Directed the automation of customer invoicing (IKON) at a throughput of 10,000 invoices a week, turning a manual process that took 3 days and 10 people into an automated workflow running in under 4 hours — later held up as a model for machine-based process redesign.
- Managed enterprise SAP programs for Cardinal Health, Voltas, Nelco, and Oxford Stationary (Retail), delivering each engagement on schedule and within budget.
- Caught and owned a ~₹5 Cr financial posting error, going directly to CFO-level leadership to get it corrected — the transparency became a trust-building reference point with the client.
- Took on the archival and SAP-Salesforce Order-to-Cash integration for a leading US healthcare logistics client with no in-house precedent to draw on — built the capability from scratch and deployed it in under 4 months, with measurable savings in database and system performance.

EDUCATION HISTORY

XLRI, Jamshedpur

Global Senior Management Program — Organizational Leadership

Jun 2026 – May 2027

Om Kothari Institute of Management & Research, Kota

MBA — Marketing & HR

Jul 2002 – May 2004

Government College, Kota

B.Sc. — Computer Application

Jul 1999 – Jun 2002

SKILLS & CERTIFICATIONS

Certification	Application Experience
● SAP Enterprise Architect ● SAP Signavio ● SAP BRIM ● SAP S/4Hana Sales ● PRINCE2® Project Management ● GenAI Ninja White Belt	● SAP LeanIX for Enterprise Architecture) ● SAP Cloud ALM for Project Management ● SAP Signavio for Business Process Mining ● Appian for Process Orchestration ● Zuora for CPQ and Billing ● Joule for SAP AI Credit Implementation

AWARDS & RECOGNITION

- Received multiple impact awards — “Ownership to Deliver Fast,” “Customer First,” and “Team Player” — across projects delivered for the Philips Healthcare System, recognizing fast turnaround, strong customer and team engagement, and consistently high-quality, value-based delivery.
